

EOD Update – 25 June 2026

Tasks Completed:

- Continued learning and implementation of NestJS Authentication. • Studied and understood Auth Guard flow in NestJS, including JWT token validation and request authorization. • Explored the request lifecycle in NestJS Controllers:

- @Post() decorator
- @Body() decorator
- Controller to Service flow
- Request and response handling • Worked on Forgot Password API implementation and analyzed how request data is received and passed to the service layer. • Practiced Couchbase operations and reviewed user document structure and key generation patterns. • Reviewed authentication-related code and improved understanding of controller-service interaction. • Performed code walkthroughs and clarified NestJS concepts through practical examples.

Learning Outcome:

- Gained better understanding of NestJS request handling flow. • Improved knowledge of authentication and authorization mechanisms. • Strengthened understanding of DTO usage and dependency injection.
- Enhanced familiarity with Couchbase document storage and retrieval patterns.

Plan for Next Day:

- Continue NestJS authentication module enhancements. • Practice additional Auth Guard and JWT scenarios. • Explore password reset token generation and validation flow. • Continue hands-on Couchbase integration exercises.
